

Smart Data Flows. Centralized Control. With FNT IntegrationCenter

Do you maintain data manually and redundantly across multiple systems? With integrations, data can be shared purposefully and synchronized automatically, allowing you to access and edit it seamlessly across system boundaries.

How high is your manual effort for data maintenance and exchange? Many companies waste unnecessary time on individual, error-prone workarounds.

How good is your data quality across system boundaries? Disconnected systems often lead to inconsistencies and gaps in decision-making.

Your benefits with FNT IntegrationCenter:

- ✓ Standardized and maintainable connection of external systems (CMDB, ERP, OSS, etc.)
- ✓ Improved data quality and higher automation
- ✓ Reduced integration effort and complexity
- ✓ Faster time-to-value when linking systems

Quick Check:

Is FNT IntegrationCenter relevant for you?

Yes No

Do you use more than one external system (e.g., SAP, ServiceNow, NetCool, etc.) in combination with FNT Command?

Do data sets need to be regularly synchronized between FNT Command and other systems?

Do you often need to maintain or adapt existing interfaces?

Do you want to further automate your IT and network processes?

Are you planning additional system integrations or an IT integration project?

More than two checkmarks? Let's talk!
