

FTTx Operation Management Report

Why use this report?

You want a comprehensive overview of your network infrastructure, including socket availability, connection details, and cable specifics.

KPIs in this report

- **Number of connected, free and blocked sockets by**
 - Location
 - Medium
- **Detailed overview of devices, related sockets and connections**

Business Value

- **Infrastructure Optimization:** Track socket availability and connection status to ensure optimal utilization of network resources, avoiding unused or underutilized capacity.
- **Issue Identification and Resolution:** Highlight blocked sockets and their locations, enabling quick resolution of connectivity issues to minimize downtime and service disruptions.
- **Resource Planning:** A breakdown of fiber optic and copper sockets by location helps allocate the right resources for current and future network needs.
- **Network Transparency:** A detailed view of devices, sockets, and connections, including cable types, lengths, and statuses, ensures better network documentation and management.

- **Improved Customer Service:** Quick identification of issues related to connections or endpoints supports faster resolution times and improved customer satisfaction.
- **Cost Efficiency:** Prevent over-investment in unnecessary equipment by accurately tracking free and utilized resources, reducing capital and operational expenses.
