

Infrastructure Composition by Asset Report

Why use this report?

You need to know how many devices you have, who manufactures them, and where in your organization each device is located.

KPIs in this report

- **Number of devices by:**
 - location
 - manufacturer
 - device function
 - device network category

Business Value

Improved Asset Management: A complete inventory allows for more effective tracking of devices, preventing loss and reducing redundancies. This streamlines asset management and helps optimize resource allocation and utilization.

Enhanced Security: Understanding where each device is located and who manufactures it enables better monitoring and management of security vulnerabilities. You can quickly identify at-risk devices for updates or replacements, enhancing the overall security posture.

Streamlined Maintenance and Support: Knowing the manufacturers and product families of your devices simplifies maintenance planning, vendor management, and support coordination. This reduces downtime and improves service efficiency.

Regulatory Compliance: Accurate data about device locations and manufacturers helps ensure compliance with regulatory requirements and industry standards, reducing the risk of fines or penalties.

Disaster Recovery and Business Continuity: Knowing exactly what devices you have and where they are located allows for more efficient disaster recovery planning, minimizing potential downtime and ensuring business continuity.
