

// We develop software with passion!

With our software, banks can execute transactions faster, airports can provide new digital services for their passengers, car manufacturers can produce more effectively, or telecommunications companies can roll out the new 5G technology smoothly. We offer individual development opportunities and exciting tasks in an international environment.

We are looking for a

// Quality Assurance Engineer (m/f/d)

to strengthen our team in Timisoara. Shape the digital future with us!

Exciting tasks await you:

- Identify the proper scenarios in accordance with specifications, define and maintain the test cases
- Test newly developed software features and report bugs
- Identify scenarios that can be automated
- Develop and maintain automated test scripts to ensure maximum coverage, quality and scalability
- Integrate tests into development flow (CI/CD)
- Execute test cases (manual and automated) and analyze the results
- Contribute to the continued improvement of QA test strategy and process
- Manage own assignments and schedule
- Operate on a wider range of activities with high level of autonomy

With this you inspire us:

- Very good IT skills due to completed vocational training in computer science or an equivalent qualification
- Experience in QA methodologies and good understanding of test principles, approaches and techniques
- Knowledge and understanding of Software Development and Quality assurance process and lifecycle
- Proven experience developing automated tests using automation frameworks (Selenium, Junit, RestEasy or similar)
- Scripting skills in Java or other OOP programming languages
- Knowledge of code versioning systems
- Good knowledge of API testing and familiar with Agile frameworks
- Excellent communication skills
- Independent, structured and goal-oriented way of working
- Fluent in speaking and writing in English is required
