

FNT Catalog Management

Catalog-Driven Delivery to Design and Deliver Digital Services

A catalog-driven approach puts the customer center stage, determines their specific needs and requirements, and takes these findings into account for every decision made in the service design and delivery.

In today's digital age, the success of a company is measured by the speed and flexibility in which they can introduce new services to market and deliver them seamlessly to customers – often supported by highly automated processes.

In order to take full advantage of automation, a product-driven approach with a unified catalog that creates transparency over all service assets and a high degree of standardization of services is needed. This standardization enables the end-to-end automation of processes across silos and leads to an improved speed-to-market, lower costs, and increased customer satisfaction.

THE CATALOG-DRIVEN APPROACH

To effectively offer a customer-centric product portfolio, standardization is key. With this modular approach, components are flexible and can be configured individually when a new product is created.

Once a product portfolio is established, service providers must implement a software solution that offers a comprehensive catalog management system to define, manage, and monitor services over their entire service lifecycle.

FNT Catalog Management is an enterprise-wide product, service, and resource catalog based on a best-practice methodology. FNT Catalog

Management enables enterprise IT customers and service providers to holistically design, define, manage, and operate products and digital services. It acts as the single system of record for services and lifecycle management, the heart of any service delivery platform.

FNT Catalog Management is based on the industrial principles leveraging standardization, variant management, and modularization. This allows providers to quickly design new services based on standard components, enabling them to react fast on market demands and respond to competitors in an easy and flexible manner. Best of all, the customer feels like they are getting an individualized service although it is actually composed of standardized building blocks.

THREE SOLUTION LEVELS

One size does not fit all, especially when it comes to software. All solutions are available in three versions of progressively increasing functionality. Choose the level of support that best suits your needs. Change your selection as your needs change.

BASIC

FNT's introductory package. It contains all the functionality required to fulfill the main purpose of the solution.

STANDARD

Provides extended functionality, including enhanced reporting and dashboarding capabilities. Other functional enhancements improve the execution of additional use cases the solution supports.

ADVANCED

FNT's most comprehensive package. Provides all Basic and Standard functionalities, plus additional advanced tools to more fully automate processes. Supports execution of the primary and extended use cases with the highest degree of performance excellence.

// USE CASES

SERVICE DESIGN & PORTFOLIO MANAGEMENT

To accelerate service design, FNT Service Design provides a best-practice methodology that allows to graphically define and compose standardized building blocks that include SLA parameters, commercial and technical features, prices, configuration variants, responsibilities, and work orders for the subsequent design and management of individual product catalogs and service inventories.

- Design, define and compose products and services faster from both a business and IT perspective with the help of a proven methodology
- Bring IT services to market faster and in a range of configuration variants that match customer requirements with standardized templates
- Manage portfolios and customer-specific catalogs centrally and maintain full control of publications and versioning
- FNT Offer and Contract Management let customers easily select configuration variants, use them to create offers and manage contracts

SERVICE INVENTORY

FNT Service Inventory provides a centralized and comprehensive overview of all delivered services per customer including sub-services, provisioned (infrastructure) resources, cost / price metrics, propagation rules and contract information (SLAs). The costs of individual service components are aggregated to create the final price and can be managed via currency, cost type, and configuration. FNT Service Inventory serves as single system of record that exchanges information with rich APIs with systems that are involved in all relevant processes, ranging from online stores to process and workflow orchestration, service monitoring, and IT service automation.

- Share accurate product, service, and resource data across the entire organization and thus leverage IT service automation
- Digitized catalogs accelerate subsequent service delivery processes and provide the basis for smooth service deliveries, faster processes, and lower process costs
- Create benefit-oriented descriptions for each individual service with corresponding technical parameters for subsequent deliveries
- Create cost structure transparency to price a service and to justify higher -prices for complex services

PRODUCT AND SERVICE LIFECYCLE MANAGEMENT

Continuously update even the most extensive service portfolios with FNT Product & Service Lifecycle Management. Track and manage the status of every service or individual asset over the entire lifecycle – from initial offer through deployment to end-of-life. FNT Product & Service Lifecycle Management also enhances Business and IT Collaboration by providing complete transparency into the service inventory, business viewpoints, the technical and procedural aspects, as well as the dependencies and relationships between internally provided and externally purchased services.

- Maintain full control while implementing rolling improvements
- Experience greater efficiency in the affected processes as well as detailed analysis

Major Benefits of FNT Catalog Management

REDUCE COSTS AND IMPROVE EFFICIENCY

- Lower integration and processing costs
- Utilize standardized data references to improve workflows

MAXIMIZE CUSTOMER SATISFACTION

- Describe IT services in a more user-friendly way
- Provide benefit-oriented service descriptions and configuration options
- Deploy services faster and more efficiently

ACCELERATE INNOVATION AND LEVERAGE NEW SERVICES

- Reduce time-to-market
- Optimize cost structures

LAUNCH NEW PRODUCTS AND SERVICES FASTER

- Improve business and IT collaboration
- Individualize products and services by configuration

BUILD, USE, AND REUSE PRODUCT AND SERVICE DATA

- Leverage modularization, standardization, and variant management
- Quickly reuse product and service data across the entire lifecycle

IMPROVE SERVICE DELIVERY BY LEVERAGING AUTOMATION

- Map products and services to the IT infrastructure underneath
- Automate products and services
- Drive operational excellence with faster service design
